Get ready for the Claude Code exercise

You will work in a team with **Claude Code**, an AI coding agent, and build something from scratch. What you build is revealed at the kickoff.

The exercise runs 3 hours on day 1 and 2 hours on day 2 of the lunch-to-lunch. There is no time for setup in the room, so **everything on this page must work before day 1**. You do not need to read up on anything else.

1. GitHub account

- Create a free account at **github.com** if you do not have one.
- **Reply to this email with your GitHub username by Friday 7 November.**
- You get an invitation to the organisation **vibe-jam-2026**. Accept it when it arrives.

2. Tools on your laptop

- **git**: check with **git --version**. Set your name and email with **git config --global user.name** and **user.email**.
- **GitHub CLI** (cli.github.com), then run **gh auth login**, so that a push works without asking for a password.
- **Claude Code**: on Mac or Linux run **curl -fsSL https://claude.ai/install.sh | bash**, on Windows (PowerShell) **irm https://claude.ai/install.ps1 | iex**. Check with **claude --version**.
- A code editor you like, and an up-to-date web browser.

3. Your team's login

- Your team and its Claude login come in a separate email.
- Start **claude** in an empty folder, log in, and ask it something small. If it answers, you are ready.
- The team shares one login. Do not change its password or settings.

4. The laptop and the network

- Bring a laptop you can install software on, and its charger.
- It must reach **claude.ai**, **api.anthropic.com** and **github.com** from the network you will use in the room. Test it from there if you can.

Checklist

What	By
GitHub username sent	Fri 7 Nov
Invitation to vibe-jam-2026 accepted	Tue 10 Nov
git, GitHub CLI and Claude Code installed, gh auth login done	Tue 10 Nov
Logged in to Claude Code with the team's login, and got an answer	Tue 10 Nov

Rules that apply from the start

- **No Saab code, documents or data, and nothing classified**, in Claude or on GitHub. Public information and made-up data only.
- The repos are **public**: anyone can see what is pushed.
