Get ready for the Claude Code exercise

You will work in a team with **Claude Code**, an AI coding agent, and build something from scratch. What you build is told at the start of day 1.

The exercise runs 3 hours on day 1 and 2 hours on day 2 of the lunch-to-lunch. There is no time for setup in the room, so **everything on this page must work before day 1**. You do not need to read up on anything else.

1. GitHub account

- Create a free account at **github.com** if you do not have one.
- **Reply to this email with your GitHub username by Friday 6 November.**
- You get an invitation to the organisation **vibe-jam-2026**. Accept it when it arrives.

2. Nothing to install

- Everything is done in the **web browser**: Claude Code at **claude.ai/code** and your repo on **github.com**.
- Use an up-to-date Chrome, Edge or Firefox.
- Log in to **github.com** in that browser before day 1.

3. Your team's Claude account

- Your team and its Claude address, **teamN@rawe.se**, come in a separate email.
- You log in at **claude.ai/code** with the team's address at the start of day 1. Adrian gives you the login code in the room.
- The team shares one account. Do not change its settings.

4. The laptop and the network

- **Bring your Saab laptop** and its charger.
- The room's network reaches **claude.ai** and **github.com**.

Checklist

What	By
GitHub username sent	Fri 6 Nov
Invitation to vibe-jam-2026 accepted	Fri 6 Nov
Logged in to github.com in your browser	Fri 6 Nov

Rules that apply from the start

- **No Saab code, documents or data, and nothing classified**, in Claude or on GitHub. Public information and made-up data only.
- The repos are **public**: anyone can see what is pushed.
